PROFESSIONAL SUMMARY

Flutter developer with 4+ years of experience building and shipping production mobile apps for iOS and Android. I work with Dart, Flutter, Clean Architecture, and reusable UI components. Comfortable with GoRouter, widget testing, accessibility, REST APIs, Firebase, ThemeExtensions, and the full release process on both app stores. I also use AI coding tools effectively—experienced with **Claude Code, Codex, Antigravity, and Cursor**—as part of my daily workflow to speed up development and reviews.

TECHNICAL SKILLS

Languages & Frameworks: Dart, Flutter, JavaScript, Node.js, NestJS, Express.js

Mobile & UI/UX: Cross-platform iOS/Android, Responsive UI (MediaQuery), Reusable Widgets, ThemeExtensions, Custom Animations, CustomPaint, Accessibility

Architecture & Design: SOLID, Clean Architecture, MVVM, MVC, Repository Pattern, Dependency Injection (get_it, injectable)

State Management & Navigation: BLoC, Provider, GetX, GoRouter, Streams, RxDart

Networking & Data: REST APIs, Dio, Retrofit, Hive, Sqflite, Shared Preferences, JSON parsing with compute/isolates, Socket.IO

Firebase & Backend: Firebase Authentication, Cloud Firestore, Firebase Cloud Messaging (FCM), Crashlytics, JWT

Authentication & Security: Google Sign-In, Apple Sign-In, Twitch Authentication, OAuth 2.0, Secure Storage, Multi-user Management, Role-Based Access Control (RBAC)

Device & Platform Integrations: Platform Channels, Native Android/iOS Views, Google Maps Integration, TTLock SDK, Deep Linking, Localization (i18n), IoT Integration

Testing & Performance: Widget Testing, Unit Testing, Accessibility Checks, Flutter DevTools, Memory & Network Profiling, Isolates, Rebuild Optimization

Tools, Deployment & AI: Git, GitHub, Android Studio, VS Code, Google Play Console, Apple App Store Connect, TestFlight, AI Coding Tools (Claude Code, Codex, Antigravity, Cursor)

Monetization & Payments: RevenueCat, In-App Purchases, Google AdMob, PowerTranz & Third-party Payment Gateways

EXPERIENCE

Senior Flutter Developer · Kmphitech LLP Mar 2024 - Present | Surat, Gujarat

- Architected, maintained, and **independently deployed all 15+ production cross-platform mobile applications** (including Shuffleburn, Flient, PickupBuddy, ELIM, La Dolce Vita, AI Chatbot, and Twitch Scheduler) for iOS and Android using Clean Architecture, maintaining a **99.5%+ crash-free user rate** via Firebase Crashlytics.
- Owned the end-to-end store release pipeline (versioning, code signing, Play Console, App Store Connect, and TestFlight) across all 15+ apps while **mentoring and unblocking teammates** on complex store rejections and deployment workflows.
- Spearheaded **Shuffleburn** using an **AI-Native Software Development workflow**—designing the full-stack system architecture (Flutter + Node.js/NestJS/Express.js) and orchestrating AI coding agents (**Claude Code, Codex, Antigravity, Cursor**) to accelerate end-to-end feature implementation and deployment.
- Implemented and deployed **In-App Purchases (IAP)** and subscription flows across multiple production apps using both the native `in_app_purchase` Flutter plugin and **RevenueCat**, driving seamless cross-platform monetization.
- Engineered scalable design systems using **Flutter ThemeExtensions**, complex custom animations, and responsive UI components while eliminating UI jank by offloading heavy JSON parsing to background **Dart isolates (`compute`)**.
- Standardized modular networking and caching layers across projects using **Dio, Retrofit, and Hive**, handled declarative routing with **GoRouter**, and enforced quality through unit/widget testing and accessibility audits.

Senior Flutter Developer · CodeInfosys Dec 2022 - Feb 2024 | Surat, Gujarat

- Designed and shipped high-performance cross-platform iOS and Android applications using Flutter, Dart, Clean Architecture, and MVVM/MVC patterns, improving code maintainability and reducing feature delivery cycles.
- Integrated REST APIs from multiple services with optimized state management and local caching for reliable data synchronization and offline resilience.
- Implemented in-app purchase monetization and applied encryption with secure local storage to protect sensitive user and transaction data.
- Mentored junior developers through code reviews and pair programming sessions, participated in Agile sprint planning, and managed production releases on Google Play Console and App Store Connect.

Flutter Developer · Helsy Infotech Pvt. Ltd. Oct 2022 - Nov 2022 | Surat, Gujarat

- Collaborated with UI/UX designers, backend developers, and cross-functional stakeholders to deliver applications on time and within project requirements.
- Performed comprehensive testing, debugging, and performance optimization across devices; integrated and tuned Google AdMob advertisements for effective revenue generation.

Flutter Intern · iFlutter Institute Apr 2022 - Sep 2022 | Surat, Gujarat

- Wrote clean, maintainable, and reusable Flutter components by following modular structure, industry best practices, and coding standards.
- Integrated third-party packages and services including payment gateways, Google Maps, Shared Preferences, and SQLite/Sqflite with proper dependency management and documentation.

PROJECTS (PART OF 15+ PROJECTS DEPLOYED AT KMPHITECH)

Shuffleburn — Full-Stack Application (AI-Native Development)

- Architected and deployed a complete full-stack production application end-to-end by defining feature specifications, backend/frontend system architecture (Flutter, Node.js/NestJS), and API contracts while directing AI coding agents (Claude Code, Codex, Antigravity, Cursor) for rapid implementation, code review, and store release.

Flient Mobile Application — IoT Smart Lock Solution

- Developed a production Flutter-based IoT mobile application integrated with the TTLock Smart Lock SDK for smart lock control, digital key sharing, and access records management.
- Built a custom-branded client application functioning as a rebranded version of the TTLock experience aligned with the partner ecosystem, with single-session user management for secure cross-device access.
- Handled end-to-end mobile development independently, including native SDK integration, REST API work, feature delivery, and debugging to deliver a scalable IoT smart lock solution.

PickupBuddy — Transportation & Logistics Platform

- Developed PickupBuddy, a real-time logistics platform for booking cargo transportation with support for multiple vehicle and cargo type options.
- Built a serverless backend on Firebase Firestore with real-time job postings, driver availability, and live trip updates.
- Implemented zone-based and layered filtering to help drivers quickly find relevant transport jobs.
- Integrated Google Maps for live location tracking, route display, and navigation.
- Added in-app real-time chat between drivers and customers for seamless communication, push notifications, PowerTranz payment integration, and Google & Apple authentication for secure login and transactions.

ELIM — Radio Streaming Platform

- Developed ELIM, a mobile radio streaming platform supporting multiple Quran recitation tracks with seamless audio playback.
- Built the backend using Firebase Firestore to manage content and enable real-time track updates without forcing app releases.
- Implemented a background audio player for uninterrupted listening while the application runs in the background.
- Utilized RxDart for efficient multi-stream handling and reactive state management across audio playback and real-time data streams.
- Designed a scalable structure to dynamically support new reciters and tracks without requiring an app update.

Additional Project Contributions

- Contributed to the development of an **AI-powered chatbot application** focused on improving automated user interaction and support, while actively leveraging AI coding tools (Claude Code, Codex, Antigravity, Cursor) to accelerate development and code reviews.
- Worked on **La Dolce Vita**, a venue creation and booking platform in Dubai, supporting features for venue listing, booking management, and user engagement.
- Designed modern UI with smooth animations for specialized client applications and developed features for a **Twitch schedule management application** to help users track and manage streaming schedules efficiently.

EDUCATION

Bhagwan Mahavir University | Bachelor of Computer Applications (BCA) 2021 - 2024 | Surat, Gujarat
